Why Skorcard chose TaranDM

- Robust change-management system that ensures transparency and control over every adjustment.
- Powerful simulation capability, allowing testing across environments – including with production data from past periods.
- Built-in pilot functionality with an easy-to-use pilot size cap.
- Flexible deployment options, enabling smooth integration into our environment.
- Modern technology foundation, making it easy for new team members to learn quickly and become productive.
- Flexible model and data integration, supporting a wide range of input formats for both models and tables.
- Implementation time measured in weeks, not months.

"TaranDM team demonstrated great transparency, responsiveness and flexibility during project negotiations as well as very competitive commercial terms. Most importantly, they effectively addressed the core business challenges of our risk team."

Ongki Kurniawan

Co-Founder and CEO, Skor Technologies

"We were really pleased and amazed by the quantity and quality of help provided by the TaranDM team in implementing the decision engine for Skorcard. Within a very strict timeline, they worked at tremendous pace – while educating our team in the process – to get the decision engine integrated and ready for deployment. As a founder, I would recommend TaranDM without hesitation to anyone looking to use a decision engine."

Kush Srivastava

Co-Founder and CTO, Skor Technologies

"TaranDM is clearly designed by practitioners who have been heavy users of decision engines themselves. It seamlessly addresses many of the typical pain points of traditional decision-management tools, making daily use both efficient and intuitive. Its design naturally guides users toward industry best practices."

Kirill Odintsov
